

DRAFT PDP B3.2

GOAL 1

Create 1 hi-fi prototype which can be presented in a professional context. This can require a more in-depth knowledge of electronics but also materials. It is mainly about the competency Integrating Technology. At the demo-day this prototype has to be done and fully functional without wizard of Oz or functions that have to be filled in by the mind.

GOAL 2

Reflect on a more regular basis, ideally every day a small sentence. I will make a special book for only reflection and shouldn't put too much effort in creating a complete reflection, but write short sentences.

GOAL 3

Do more research on social design by finding literature, articles and social designers. I want to write a report about my findings of social design and how it is related to me as a designer. This will help me to better understand my vision on design.
